ABOUT THIS DOCUMENT

This document is an introduction to the concepts that will be utilized in METAPIZZABUCKS OPEN WORLD RACING GAMES, as well as a deeper dive into the blockchain elements of the game itself, its economy, and how non-fungible (NFT) and fungible tokens will exist within this experience. MEAPIZZABUCKS will have two levels of Games from 3D to Metaverses, all will be available at separate times and versions. This Whitepaper should be treated as a living document that can be updated often in which the progresses in development and the aspects of the all type of Game evolves.

OUR BRANDS

METAPIZZABUCKS

Developer of online OPEN WORLD, BSC Blockchain-based DEFI NFT Games, Metaverse and AAA graphics, Auto Racing Game. The Racing game is set in many major cities globally, along with customization of cars, avatar, level up, and acquisition of real estate, art, music and collectibles within the game. All games will be produced on the Binance Smart Chain. NFT collectibles within the games are able to be bought and sold or traded. PizzaBucks will have the games available in android and ios platforms, eventually PC versions. First Version of the game to arrive Q1 2022 and extra features and upgrades within Q2 of 2022.

The Level Up game will require MetaPizzaBucks \$PIZZAB and PizzaNFT \$PIZZA tokens to play on expert level ups: access to acquisition of land plots, buildings, cars, collectibles and music in the NFT Marketplace. There will be beginner's free version demo to play without tokens.

PIZZA NFT

Creator and Developers of Pizza ASTRO NFTs, Astro Games, Astro Short Cartoon Movies and the PIZZA NFT MARKETPLACE on BSC.

SAFEPIZZA CHARITY FOUNDATION

SafePizza Charity Foundation is our direct distribution of groceries to the poor and very needy. WE have our own project management team to deliver directly to the poo. There is limited admin cost as there is no reason to have unnecessary expenses if we conduct the program ourselves. We have been distribution food groceries in the Mumbai, India and Tamilnadu, India for many months in 2021 and beginning of 2022. We recently started some food aid for villages affected by typhoon in Philippines. Our goal is expansion to more needy remote areas and for the orphan children and elderlies.

WHAT IS METAPIZZABUCKS?

METAPIZZABUCKS is a BSC token, ticker symbol \$PIZZAB, development of Open World Game Auto Racing Game available in 2D, 3D and VR; NFT Marketplace and Play to Earn.

The NFTs Collectible Game centers around obtaining and trading rare virtual items including Cars, Mechanics, Racing Crews, Tools, Components, Garages, Track, Stadium, Hotels, Restaurants, Pizza Joints, Land and Buildings. It adds gamification to the collection of NFTs.

Players of METAMETAPIZZABUCKS will enjoy the new frontier that rewards players to play, rewards for their time and efforts to play and rewards for them expanding their ecosystem. This reward is either intrinsic values in the NFT Collectibles Games or their ecosystem values.

The Racing Game will be a gaming experience similar to traditional racing games in the marketplace. The Players will be able to take their Avatar and Collectibles (Cars, Mechanics, Crews, Tools, Components, and or Garages) and manage them for the Open World Racing.

Both the Collectibles Game and Racing Game are in the development process, and more details about both components to be issued as the game design development progresses.

In Summary, the Game theme are high end racing cars and luxury | exotic automobiles in a global real estate acquisition arena. Players can customize their avatar, their car(s), their garage(s) and many customizations within the game. Selection of NFT collectibles to buy in the game from skins on their vehicles, music to play while driving, and customized avatar wardrobe down to the sunglasses and timepieces. METAPIZZABUCKS takes the player into two styles of playing. One version to be released first is rich graphics in 3D and NFT collectibles. The second version is MetaPizza Verse | VR. Players can be in virtual reality to play and craft their cars and be in top major cities or coastal locations.

Our games are designed to be played in the Binance Smart Chain and will require METAPIZZABUCKS' \$PIZZAB and PIZZANFT'S \$PIZZA tokens to play and make purchases of NFTs. The Fungible Token is PIZZAPAY \$PIZZAPAY used in the game as the cryptocurrency within the game. Play to Earn is part of the DNA of the game.

OUR MISSION

METAPIZZABUCKS' mission is to develop Open World, high end exotic cars, video game, played online, using DEFI for players to Play To Earn (P2E) cryptocurrency, in the best blockchain technology of NFT automobiles, art, music and real estate. Various versions of our NFT online games from 3D to VR | Metaverse will be produced for players to choose from.

BLOCKCHAIN - The Technology

A blockchain is an unalterable ledger, a database that does not get overwritten as new data is added; instead, new data is added to it. Thanks to the combination of cryptography and distributed consensus, the transaction history is protected from being overwritten, and the validity of the entire history can be verified. What a blockchain allows is a decentralized system where transactions and ownership can be verified by anybody, because all data that passes through a blockchain remains on it. An example, a switch in ownership will not erase the previous owner, but instead adds a new owner to the history. This format of verified ownership and uneditable states can be expanded and interpreted in ways which enable the design of new game experiences.

What is Binance Smart Chain?

<https://beincrypto.com/learn/binance-smart-chain-bsc/#h-binance-smart-chain-explained>

Binance Smart Chain (BSC): A

Beginner's Guide

By Rahul Nambiampurath

30 September 2021, 16:39 GMT+0000

Updated by Rahul Nambiampurath

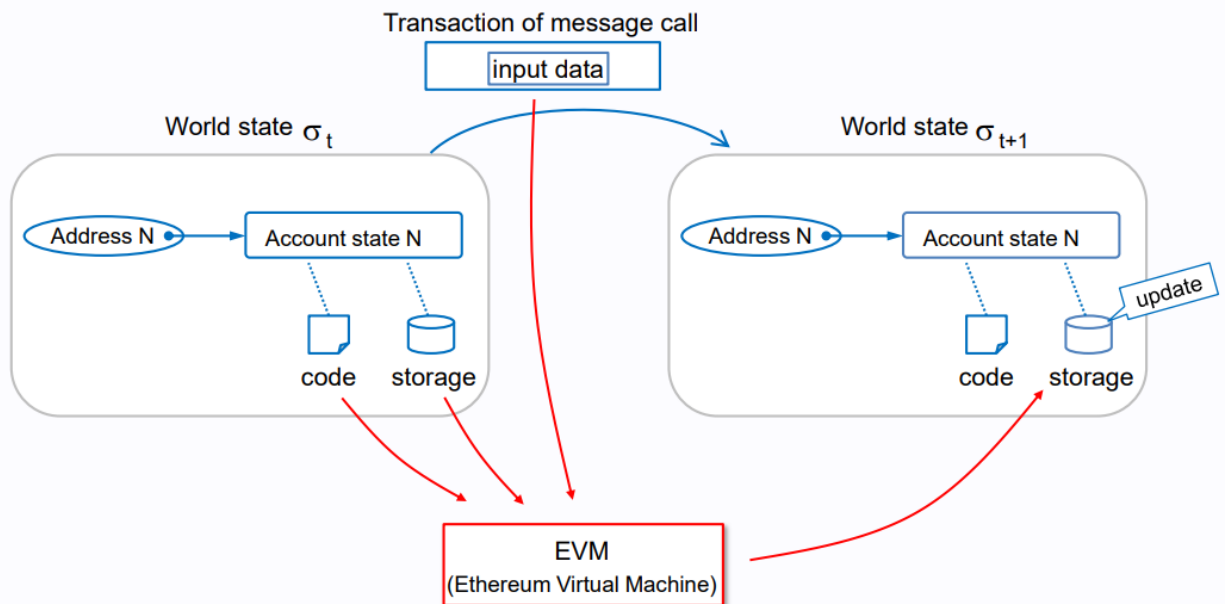

30 September 2021, 16:46 GMT+0000

Binance Smart Chain explained

Binance Smart Chain (BSC) **represents the second generation of blockchain technology**. While Bitcoin (BTC), Litecoin (LTC), Dogecoin (DOGE), and others are the most known cryptocurrencies, they are merely the first generation of blockchains with the sole purpose of producing one product — digital money.

In contrast, **Binance Smart Chain is a generalist blockchain platform ready to deploy smart contracts**. These automated pieces of code can codify any conceivable logic, including traditional banking services — exchanges, borrowing, and lending. On a technical level, **BSC's smart contract development is possible thanks to EVM** — Ethereum Virtual Machine.

Just like there are engines in the video gaming industry that power games, such as Unreal Engine or Source, so there are blockchain engines. Because of the decentralized nature, an EVM must function as a decentralized computer, executing smart contracts dispersed across thousands of computers — network nodes.

Ethereum virtual machine: Illustrated by Takenobu T.

Because of this shared EVM legacy, **BSC can easily support smart contracts written on other EVM-compatible blockchains**. Once again, this is analogous to the porting of a PC game to PlayStation or Xbox and vice-versa. The engine compatibility is the key.

Through Binance API (application programming interface), developers connect to Binance servers in order to code smart contracts in any number of programming languages — GO, Java, JavaScript, C++, C#, Python, or Swift.

What is NFT?

Non-Fungible Tokens, commonly known as NFTs, acts as a non-duplicable digital certificate of ownership for any assigned digital asset. It is a Smart Contract that is put together using bits of Open Source Code, available from platforms i.e. GitHub, that is used to secure the digital item. Upon the written code, it is then minted, or permanently published into a token (commonly known as ERC721) on a blockchain, which in this case we use Binance Smart Chain.

NFTs Explained

<https://alexandre-lores1984.medium.com/?p=69c9f6315e84>

An 8-Minute Guide to Non-Fungible Tokens

If you follow the news in the cryptocurrency markets, the broader financial markets or just watched Saturday Night Live last night, you have heard about NFTs. And, like I was, you might be a little confused about them.

There is a LOT of hype going on right now. This can be exciting to you, terrifying, or both. I am a strong believer in learning about and understanding things before getting involved, especially those things that come with a high risk and a high reward. I am passionate about making complex things understandable to everyday people. In this article, I try to break it down for you. Like in all my articles, this is not investment advice.

If you have no idea what an NFT is, or if you know or have heard about them but are still a little confused, join me!

In this article we will dive into:

- a) *Basic Concepts*
- b) *The Hype*
- c) *The Technology Hype Cycle*
- d) *Looking Ahead*

Basic Concepts

Let's break down some terms before we move forward.

NFT: Non-Fungible Token.

Fungible: *adjective.* able to replace or be replaced by another identical item easily; mutually interchangeable.

Examples of fungible things:

A US \$20 Dollar bill
A quarter
0.1 Bitcoin
A gallon of milk
A gallon of gasoline

Fungible

These are cryptocurrencies on a blockchain that can be easily bought and sold. They are not unique. 1 Bitcoin or 0.1 Bitcoin is equal to the same amount of Bitcoin. It doesn't matter which Bitcoin it is, 0.1 Bitcoin owned by one person is equal to 0.1 Bitcoin owned by another person. There are over 8,500 cryptocurrencies that are tracked at coinmarketcap.com. As of earlier evening on March 28th, there were 2,048 of them that have a market capitalization of \$100,000 or more. Market capitalization (market cap for short) means the total value of all tokens of a certain cryptocurrency. This is calculated by multiplying the number of tokens in circulation times the value of each token. These are bought and sold on different exchanges, held in wallets, or paid for goods and services where they are accepted.

Tokens:

Non-fungible: *adjective.* Not fungible. Not able to replace or be replaced by another identical item easily; not mutually interchangeable; Unique.

Examples of non-fungible things:

The Mona Lisa
A rare antique 1670 violin (on eBay for \$275,000)
An original 19th century painting from Austria (on eBay for \$100,000)
A 1952 Mickey Mantle rookie card which sold for \$5.2 million in January
A family heirloom handed down for many generations

Non-Fungible

Certain blockchain networks allow for the creation of unique and indivisible tokens that cannot be directly exchanged for one another, called non-fungible tokens (NFTs for short). Use cases for non-fungible tokens include: digital art, collectibles, gaming, certifications and personal licenses, domain names, music, and in the near future — fashion, finance and insurance.

Tokens:

The Hype

Beeple's collage, *Everydays: The First 5000 Days*, sold at Christie's. Image: Beeple

In case you missed it:

- Kings of Leon released an album as an NFT on March 5th, generating over \$2 million of sales in the first week.
- Beeple's digital art collage, above, sold on an auction at Christie's (a 255-year old UK-based art auction house) for \$69 million USD on March 11th.
- Twitter CEO Jack Dorsey sold his first tweet, from March 21, 2006, for \$2.9 million (paid in Ether) on March 21st.
- Billionaire Mark Cuban launched a digital art gallery called lazy.com to display NFTs. He is also the owner of the Dallas Mavericks of the NBA. The Mavericks already accept Bitcoin and Dogecoin as payment for tickets and are now considering selling tickets as NFTs.
- Elon Musk auctioned [this song](#) about NFTs as an NFT. He was offered \$1.1 million USD for it and then changed his mind, saying he didn't feel right about it.

What the heck is going on? I believe what is going on is describe here:

"We overestimate the impact of technology in the short-term and underestimate the effect in the long run."

It's unclear exactly who first made that statement, when they said it, or how it was phrased. The most probable source is Roy Amara, a Stanford computer scientist who said this to colleagues in the 1960s. For this reason, the above is known as Amara's Law.

I believe there is a price bubble currently, and that it will come down in the short-term, and so does Beeple.

Some speculators seek to buy digital art being sold as NFTs and hope to sell it at a profit. **This is extremely risky.** While art & collectibles are considered an asset class, it is considered risky for the super wealthy to invest more than 5% of their reserves in collectibles or art. For the general population it is considered risky to invest more than 1% of their reserves into collectibles or art.

For artists seeking to take advantage of this current trend, to create digital art and sell them as NFTs, there are a number of online marketplaces for this. According to [DappRadar](#), as of March 28th, these are the top-ranking marketplaces by USD volume over the past 24 hours:

1. NBA Top Shot (\$3.36 Million)
2. Open Sea (\$3.25 Million)
3. Crypto Punks (\$1.62 Million)
4. Rarible (\$1.43 Million)
5. Sorare (\$655 Thousand)

Other cryptocurrency investors and traders have shown an increased interest investing in those cryptocurrencies that support or are involved with NFTs. This includes Ethereum as well as these 127 that are specifically listed by [coinmarketcap](#), as of March 28th. The largest by market cap include [Theta](#) (THETA), [Chiliz](#) (CHZ), [Enjin](#) (ENJ), [Decentraland](#) (MANA) and [Flow](#) (FLOW). In the previous sentence, I have included the links to their project websites if you want to learn about them in more detail.

As a note, I am not familiar with [coinmarketcap.com](#)'s system for considering which blockchains are involved with NFTs. For a deeper dive into its technology and innovation, see my recent Guide on [Ethereum](#).

These NFT-related cryptocurrencies have also been volatile lately, allowing for high risk/reward trading, making winners and losers. For example:

Theta is up 652% since January 1st, and is now the 9th largest cryptocurrency by market cap, at \$12.9 Billion.

Chiliz is up 2500% since January 1st, and is now the 40th largest cryptocurrency by market cap, at \$3 Billion. However, it is also down 37% from its all-time on March 13th.

Enjin is up 1930% since January 1st, and is now the 49th largest cryptocurrency by market cap, at \$2.08 Billion. However, it also took a 26% drop between March 16th and March 23rd.

The Technology Hype Cycle

I believe we are still at the very beginning of a worldwide shift in technology from legacy systems to digital, decentralized systems. Blockchain technology and cryptocurrencies, both using fungible tokens and non-fungible tokens have

tremendous uses. Most of them are unexplored. Additionally, I believe there are non-financial related uses of blockchain technology that will likewise transform our world.

Going deeper than Amara's law, let's look at the technology hype cycle, or [Gartner Hype cycle](#). While this is not a scientifically proven law like the principles of gravity, and has its doubters, this makes sense to me and seems to describe what's occurring with NFTs and digital currency in general. For a deep dive, click the link above. I break it down more briefly here:

- **1. New technology:** The media picks up on the existence of a new technology which may not exist in a usable form yet. Nonetheless, the publicity leads to significant interest. At this point, people working on research and development are probably not making any money from it. Lots of mistakes are made. If it seems like something new will have a dramatic payoff, it probably won't last. If it seems we have found the perfect use for a brand-new technology, we may be wrong.
- **2. The peak of inflated expectations:** A few well-publicized success stories lead to inflated expectations. Hype builds and new companies pop up to anticipate the demand. There may be a burst of funding for research and development. Scammers looking to make a quick buck may move into the area. It's here that we overestimate the future applications and impact of the technology.
- **3. The trough (the depression between waves) of disillusionment:** Prominent failures or a lack of progress break through the hype and lead to disillusionment. People become pessimistic about technology's potential and mostly lose interest. Reports of scams may contribute to this, as the media uses this as a reason to describe the technology as a fraud. If it seems like new technology is dying, it may just be that its public perception has changed and the technology itself is still developing. Hype does not correlate directly with functionality.
- **4. The slope of enlightenment:** As time passes, people continue to improve technology and find better uses for it. Eventually, it's clear how it can improve our lives, and mainstream adoption begins. Mechanisms for preventing scams or lawbreaking emerge.
- **5. The plateau of productivity:** The technology becomes mainstream. Development slows. It becomes part of our lives and ceases to seem novel. Those who move into the now saturated market tend to struggle, as a few dominant players take the lion's share of the available profits.

Looking Ahead

The current craze in digital art is real — the FOMO (fear of missing out) is causing large inflows of finance. Risk appetite and greed seem to be pretty high. It appears to be a bubble. How long it will last or if it will continue to go higher, no one knows. At least I don't. What I am much more certain (and this is my strong opinion and prediction) is that the technology hype cycle will play out. Digital currency and NFTs appear to have the power to disrupt and democratize many fields. In looking at these use cases, we will see a complete worldwide adoption and shift, and we are still very early in the game. I believe we have not yet seen 1% of the adoption of this technology that will occur in:

Collectibles
Digital art
Gaming
Personal certifications & licenses
Patents & copyrights
Domain names
Music
Fashion

What You Need To Know About Non-Fungible Tokens (NFTs)

Robyn Conti, John Schmidt

Contributor, Editor

<https://www.forbes.com/advisor/investing/nft-non-fungible-token/>

What Is an NFT?

An NFT is a digital asset that represents real-world objects like art, music, in-game items and videos. They are bought and sold online, frequently with [cryptocurrency](#), and they are generally encoded with the same underlying software as many cryptos.

Although they've been around since 2014, NFTs are gaining notoriety now because they are becoming an increasingly popular way to buy and sell digital artwork. A staggering [\\$174 million](#) has been spent on NFTs since November 2017.

NFTs are also generally one of a kind, or at least one of a very limited run, and have unique identifying codes. "Essentially, NFTs create digital scarcity," says Arry Yu, chair of the Washington Technology Industry Association Cascadia Blockchain Council and managing director of Yellow Umbrella Ventures.

This stands in stark contrast to most digital creations, which are almost always infinite in supply. Hypothetically, cutting off the supply should raise the value of a given asset, assuming it's in demand.

But many NFTs, at least in these early days, have been digital creations that already exist in some form elsewhere, like iconic video clips from NBA games or securitized versions of digital art that's already floating around on Instagram.

How Does an NFT Work?

NFTs exist on a blockchain, which is a distributed public ledger that records transactions. You're probably most familiar with blockchain as the underlying process that makes cryptocurrencies possible.

Specifically, NFTs are typically held on the [Ethereum](#) blockchain, although other blockchains support them as well.

An NFT is created, or "minted" from digital objects that represent both tangible and intangible items, including:

- Art
- GIFs
- Videos and sports highlights
- Collectibles
- Virtual avatars and video game skins
- Designer sneakers
- Music

Even tweets count. Twitter co-founder Jack Dorsey sold his first ever tweet as an NFT for [more than \\$2.9 million](#).

Essentially, NFTs are like physical collector's items, only digital. So instead of getting an actual oil painting to hang on the wall, the buyer gets a digital file instead.

They also get exclusive ownership rights. That's right: NFTs can have only one owner at a time. NFTs' unique data makes it easy to verify their ownership and transfer tokens between owners. The owner or creator can also store specific information inside them. For instance, artists can sign their artwork by including their signature in an NFT's metadata.

What Are NFTs Used For?

Blockchain technology and NFTs afford artists and content creators a unique opportunity to monetize their wares. For example, artists no longer have to rely on galleries or auction houses to sell their art. Instead, the artist can sell it directly to the consumer as an NFT, which also lets them keep more of the profits. In addition, artists can program in royalties so they'll receive a percentage of sales whenever their art is sold to a new owner. This is an attractive feature as artists generally do not receive future proceeds after their art is first sold.

Art isn't the only way to make money with NFTs. Brands like Charmin and Taco Bell have auctioned off themed NFT art to raise funds for charity. Charmin dubbed its offering "NFTP" (non-fungible toilet paper), and Taco Bell's NFT art sold out in minutes, with the highest bids coming in at 1.5 wrapped ether (WETH)—equal to \$3,723.83 at time of writing.

Nyan Cat, a 2011-era GIF of a cat with a pop-tart body, sold for nearly [\\$600,000 in February](#). And NBA Top Shot generated more than [\\$500 million in sales](#) as of late March. A single LeBron James highlight NFT fetched more than \$200,000. Even celebrities like Snoop Dogg and Lindsay Lohan are jumping on the NFT bandwagon, releasing unique memories, artwork and moments as securitized NFTs.

For instance, famous digital artist Mike Winklemann, better known as “Beeple” crafted a composite of 5,000 daily drawings to create perhaps the most famous NFT of the moment, “EVERYDAYS: The First 5000 Days,” which sold at Christie’s for a [record-breaking \\$69.3 million](#).

Anyone can view the individual images—or even the entire collage of images online for free. So why are people willing to spend millions on something they could easily screenshot or download?

Because an NFT allows the buyer to own the original item. Not only that, it contains built-in authentication, which serves as proof of ownership. Collectors value those “digital bragging rights” almost more than the item itself.

How Is an NFT Different from Cryptocurrency?

NFT stands for non-fungible token. It’s generally built using the same kind of programming as cryptocurrency, like [Bitcoin](#) or [Ethereum](#), but that’s where the similarity ends.

Physical money and cryptocurrencies are “fungible,” meaning they can be traded or exchanged for one another. They’re also equal in value—one dollar is always worth another dollar; one Bitcoin is always equal to another Bitcoin. Crypto’s fungibility makes it a trusted means of conducting transactions on the blockchain.

NFTs are different. Each has a digital signature that makes it impossible for NFTs to be exchanged for or equal to one another (hence, non-fungible). One NBA Top Shot clip, for example, is not equal to EVERYDAYS simply because they’re both NFTs. (One NBA Top Shot clip isn’t even necessarily equal to another NBA Top Shot clip, for that matter.)

NFT MARKET

WHAT IS METAVERSE?

METAVERSE for Dummies

Excellent Video Explanation: <https://www.youtube.com/watch?v=pJ7xeyUIOIU>

What is the metaverse?

<https://nypost.com/2021/10/21/what-is-the-metaverse-meaning-explained/>

Metaverse is a broad term. It generally refers to shared virtual world environments which people can access via the internet.

The term can refer to digital spaces which are made more lifelike by the use of virtual reality (VR) or augmented reality (AR).

Some people also use the word metaverse to describe gaming worlds, in which users have a character that can walk around and interact with other players.

There is also a specific type of metaverse which uses blockchain technology.

In these, users can buy virtual land and other digital assets using cryptocurrencies.

Many science fiction books and films are set in fully-fledged metaverses – alternative digital worlds which are indistinguishable from the real physical world.

But this is still the stuff of fiction.

Currently, most virtual spaces look more like the inside of a video game than real life.

METAPIZZABUCKS TOKENIZATION – Introduction

A Collectible Non-Fungible Token (NFT) is a piece of digital content that is unique. As an NFT, a Collectible can be fully owned by a player, in which that player having the ultimate permission to Use, Trade, or Sell the Collectible. The game is comprised of NFTs: Cars, Mechanics, Crews, Tools, Garages with Components referring to sets of different parts or equipment-type Collectibles that can be attached to a Car or Driver to improve their base performance.

A Fungible token (FT) is non-unique and mutually interchangeable. The in-game fungible token, PIZZAPAY \$PIZZAPAY - like the Collectibles - can be fully owned by a player, but rather than acting as a piece of content within the game, \$PIZZAPAY acts as the game's primary currency. \$PIZZAPAY is used in a number of ways: to purchase certain types of Collectibles, as a player reward for completing certain actions or achievements, as a fee to compete in the Racing Game, and to use as rewards for races. Both the fungible and non-fungible tokens have a finite supply.

OUR CORE TEAM

Khanh Dao, Founder | CEO

<https://www.linkedin.com/in/pizzaceo/>

Khanh Dao has been an award-winning restaurateur. She has decades of experience in designing, building restaurants and in the Auto industry, that have become huge success from the environment to the brand. Khanh has also been in the automotive industry, in which she developed a New Cars Porsche dealership franchise. In her multi-career acumen, she has worked and collaborated with some of Dallas, Texas' award winning architects and interior designers. The projects that Khanh has partake in, having received many design awards and brand concept awards. She is a visionary and her craft to strive for perfection is noted in all her brands. Khanh has always carefully selected the right teams that can take her vision to produce stellar results both in brand, concept and revenue. A serial entrepreneur that has visionary skills to be one step ahead of markets many times, thinking outside the box, has been her leading advantage in business over the years. Khanh has been an investor in crypto for many years and recently decided to develop her own Utility token in the Binance Smart Chain. Currently she owns and manages two tokens with her team, both PizzaBucks and PizzaNFT (formerly known as SafePizza).

DALLAS, TEXAS USA

Jazy Stark | CTO

<https://www.linkedin.com/in/jazy-stark-3948b5216>

Jazy Stark has been a Forex and Crypto Trader and Investors for several years. Jazy has been versed in blockchain technology and AI products that has helped him consult with many groups to develop their own crypto and tokens. Jazy specializes in network security and various crypto technology innovations. Jazy leads our team in development and co-designing our tokens. He is instrumental in the deployment and management of our tokens.

KERALA, INDIA

David Michel | CIO

<https://www.linkedin.com/in/david-m-569485216/>

David Michel has been involved in Blockchain technology for over 5 years. David has been a top Software Engineer for decades. His knowledge and experience in Software brings huge asset values to the team. David has been part of a large Fortune 500 company in Senior Management dealing with all the security and networking systems. David is extremely passionate about crypto and the ecosystem of all the various blockchains which he is constantly researching for new innovations. He serves as one of the key roles within METAPIZZABUCKS and PizzaNFT Token Team. David is an experienced trader and an investor in cryptocurrency and common stocks.
